1. Define modulation and explain its purpose in wireless communication

Ans: Modulation is changing a signal to send data.

2. Calculate the path loss at a distance of 500m for a signal frequency of 2.4Hz in free space.

Ans: path loss at 500m for 2.4Hz is approximately 92.45dB.

Summary:

Total Score: 0

Percentage: 0.00%

Grade: F

Overall Feedback: Feedback not found.
